```
:help vimdiff
:help 'diff'
```

- diff is local to a tab
- diffed windows: A window is included in the diff group if the 'diff' options is set

CLI

```
vimdiff file1 file2
```

Keys

]c Next change
[c Previous change

Commands

```
:help vimdiff

"" diffsplit file
" Add a file to diff
:diffsplit myfile.txt             " Add file to diff
:split myfile.txt | set diff      " same

:vertical diffsplit myfile        " split vertically

"" diffthis
" Add current window to diff
" Same as toggling the diff option
:diffthis                 " Same as 'set diff'

"" diffoff
" Remove diff of current window
:diffoff
:diffoff!               " All windows

"" diffupdate
" Force update of diff. May need to do this after some changes.
" e.g. If I undo a :diffget
:diffupdate

"" [range]diffget bufspec
" Pull change from bufspec into current file
"
:diffget           " get from other buffer, if obvious
:diffget 1         " get change from buffer 1. Use :ls to get buffer numbers.
:diffget myFile    " get change from buffer matching 'myFile'

" Range
:1diffget          " line 1 exactly
:1,10diffget       " line 1-10 exactly
:1,$+1diffget      " line 1 to end

"" [range]diffput bufspec
" Opposite of diffget. Put the changes in current file in bufspec.
```

```
"
:diffput              " put in other buffer.
:diffput 1            " put in buffer 1
:diffput myFile       " put in file matching pattern 'myFile'
```

Options

```
set diff             " Add current window to group of windows to be diffed
set nodiff           " Remove current window from group
```
