Help

```
:help expression-commands  Build-in commands, including let, unlet
```

Basics

```
"" Command call
echo "Hello"

" call with variable/function
echo g:x                      " OK
echo f()                      " OK
buffer g:x                    " NO. Some commands wrap the
arguments in quotes
                              " i.e. buffer "g:x"
buffer f()                    " NO
exec "buffer " . g:x          " OK
exec "buffer " . f()          " OK

" Variables
g:x = echo "Hello"            " ERROR. Cannot assign command
result to variable
```

Commands

```
" echo - Print to screen
"
echo g:myvar

"" let - Set and get variables
"
let                  Print all variables
let t:x = 1          Set variable
let t:x              Get t:x
let y                ERROR. undefined variable

" call - call a function
"
call myfunction()

"" execute {expr}
" execute a command from an expression
"
execute "ls %"         Same as ls %
exec "ls %"            Same
execute ls             ERROR. Not an expression

"Multiple arguments are concatenated with spaces
execute "ls" "%"         Same as echo 'Hello'.

" Pipes are not an argument
execute "ls" "%" | echo Hello

"" set - options
"
set                  Options with non-default
set all              Print all options

"" function -
```

```
function             List defined functions
function /^myfn/     List functions matching pattern
function myfn        Print myfn (function body)

"" scriptnames - print loaded files
"
" Includes: vimrc, syntax files
scriptnames          Loaded files, including vimrc, syntax files,
etc.

"" ! - run shell command
"
! ls                 Shell command

"" cd - change directory
""
cd %:p:h

"" Print last error message
message               Last error messages

"" source - read commands from file
so[urce] {file}       Read commands from file
```

File commands

```
"" print - print lines
"
print               Print current line
p                   Same
p 10                Print 10 lines from current line
1,10p               Print range. Line 1~10.

"" copy - copy lines to
"
copy 10         Copy current line and paste below line 10 (i.e.
line 11)
copy 0          Copy to top of file
copy $          Copy to bottom of file
1,5copy 0       Copy range to top of file

"" move - move lines to
" Similar to copy, but moves lines instead of copying
move 10         Move current line to below line 10 (i.e. line 11)
move 0          Move to top
move $
1,5move 0

"" normal - apply normal mode command
"
normal iHello        Same as insert mode -> Hello on current line
normal @a            Apply @a macro on current command

1,5normal @a         Apply on range.
'<,'>normal @a       Apply on visual selection.
```
