:help fold.txt
:help fold-commands Help on commands like zf, zo
:help fold-options

Fold methods
manual Select the lines in visual mode and fold
indent Fold based on indents
syntax Fold according to syntax file

== Options ==
```
## foldmethod
:set foldmethod=manual

## foldenable
# If on, enables folds. If off,
:set foldenable
:set nofoldenable
```

== Keys ==
To fold in manual mode, select lines in visual mode first, then press
zf

Move
[z Move to beginning of current fold. If already at beginning, move to beginning of parent fold.
]z Move to end of current fold. If already at end, move to end of parent fold.
zj Move to previous fold on screen.
zk Move to next fold fold on screen.

Individual folds
zo Open a fold under cursor
zO Open fold under cursor and its descendants
zc Close a previously defined fold.
zC Close fold under cursor and its ancestors
za Toggle i.e. zo if closed, zc if open
zA Toggle recursively i.e. zO if closed, zC if open

Whole file
zi Toggle between foldenable and nofoldenable. For quickly switching.
zr Open one level ('r'educe fold) i.e. zo on whole file
zR Open all
zm Fold one level (fold 'm'ore) i.e. zc on whole file
zM Fold all
