check if vim or neovim
nvim-from-vim: https://neovim.io/doc/user/nvim.html#nvim-from-vim
Use has('neovim')
See :help nvim-from-vim

```
# help
:help nvim-from-vim

# Check if neovim
if has('nvim')
    ...
endif

# Check if neovim 0.5 or above
# e.g. for LSP support
if has('nvim-0.5')
endif
```

[ERROR] lua error "Error while calling lua chunk … module not found" error
Ref: https://www.reddit.com/r/neovim/comments/ijf814/lua_with_nvim_configuration/

e.g.

```
E5105: Error while calling lua chunk: [string "<VimL compiled
string>"]:1: module 'init' not found:
        no field package.preload['init']
```

Seems like some neovim 0.5 is required

```
" Check if >= 0.5
if has('nvim-0.5')
  ...
endif
```

[vimplug] Rollback to a previous version of a plugin i.e. use a fixed commit
Use **commit** option

```
" e.g.
Plug 'nvim-treesitter/nvim-treesitter', { 'commit' :
'cfc6f2c117aaaa82f19bcce44deec2c194d900ab' }
```

==========

neovim 0.5

[ERROR] neovim 0.5 opens with "Incompatible undo file after upgrading from neovim < 0.5"
Ref: https://github.com/mbbill/undotree/issues/125
Looks like neovim 0.5's undo is different from <0.5 or vim
Just **delete** or backup the undo files
Usually under
~/.local/share/nvim/undo

e.g.

```
Error detected while processing function
396[30]..<SNR>113_callback:
line   23:
Vim(edit):E824: Incompatible undo file: /Users/
```

```
yuinishizawa/.local/share/nvim/undo/
%Volumes%Data%yuinishizawa%Projects%exaptive%exaptive_stack%repos%
cognet2%src%utils%template.js
# Delete or backup undo files
$ cd ~/.local/share/nvim
$ mv undo undo_bak
```

[ERROR] Fails to load vimplug config with 'Error executing lua [string ":lua"]:1: module <module> not found'
Ref: https://github.com/nvim-treesitter/nvim-treesitter/issues/270#issuecomment-725883316
e.g. Fails to load nvim-treesitter config

```
Error executing lua [string ":lua"]:1: module 'nvim-
treesitter.configs' not found
```

lua config has to be loaded **outside** of plug#begin() ~ plug#end()

```
" vimplug
call plug#begin('~/.vim/plugged')
 " plugin: nvim-treesitter
 Plug 'nvim-treesitter', { 'do': 'TSUpdate' }

 " BAD
 " config has to be loaded outuside of plug#end()
 lua <<EOF
require'nvim-treesitter.configs'.setup {}
EOF

call plug#end()

" OK
" config loaded after plug#end()
lua <<EOF
require'nvim-treesitter.configs'.setup {}
EOF
```
